STEP 1

Open Mozilla Thunderbird and click on the Settings icon, and then "Account Settings".

STEP 2

Under "Outgoing server (SMTP) option, select the account you want to use and click "Edit". If you have no SMTP server set up yet, click on "Add".

STEP 4

The first time emails are sent via mysmtp.com, the SMTP password received in the setup email will be required. You can copy and paste it here.

Password Required for Outgoing (SMTP) Server mail.mysmtp.com					
?	Enter your password for example@domain.com on mail.mysmtp.co				
	Use Password Manager to remember this password.				

Please note that Mozilla Thunderbird operates with "identities". Each Identity can have its own SMTP configuration, and you may also need to adjust these SMTP settings.
